### **162** [S3: similarity search in CAD database systems](#)

Stefan Berchtold, Hans-Peter Kriegel

June 1997 **ACM SIGMOD Record , Proceedings of the 1997 ACM SIGMOD international conference on Management of data**, Volume 26 Issue 2Full text available: [pdf\(587.52 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

S3 is the prototype of a database system supporting the management and similarity retrieval of industrial CAD parts. The major goal of the system is to reduce the cost for developing and producing new parts by maximizing the reuse of existing parts. S3 supports the following three types of similarity queries: query by example (of an existing part in the database), query by sketch and thematic similarity query. S3 is an object-oriented system offering an adequate graphical user interface. On ...

According to proponents of object-oriented programming, inheritance is an excellent way to organize abstraction and a superb tool for reuse. Yet, few quantitative studies of the actual use of inheritance have been conducted. Quantitative studies are necessary to evaluate the actual usefulness of structures such as inheritance. We characterize the use of inheritance in 19 existing C++ software systems containing 2,744 classes. We measure the class depth in the inheritance hierarchies, and th ...

# Drug Design

## Assessment of Molecular Similarity and Diversity

major goal of combinatorial synthesis is to obtain compounds that have a wide structural variety while simultaneously covering the structural and chemical space as completely as possible. Thereby, the probability to find active compounds within the newly created chemical libraries is increased. On the other hand biological activity is intimately tied to molecular surface properties such as the molecular electrostatic potential. These surface properties can be encoded by spatial autocorrelation functions and projected into two-dimensional maps with Kohonen neural networks. With the Kohonen maps the structural and chemical space, described by the libraries under consideration can be visualized. This visualization allows an estimation of the similarity and diversity of the libraries. Based on that estimation, recommendations for a proper selection of libraries can be given.
